We can be certain that the body does not survive death. Once the heart stops circulating blood, the brain is no longer nourished and begins to decay. On the basis of medical evidence it would seem that, within a quarter of an hour, the personality is irreparably destroyed and the individual ceases to exist. But now there is mounting scientific evidence for a life after death. In *At the Hour of Death*, veteran psychical researchers Karlis Osis, Ph.D and Erlendur Haraldsson, Ph.D collated compelling evidence that suggests we, as conscious beings, do survive physical death. This book is the product of extensive interviews of over 1,000 doctors and nurses who have been present when cases of "post-mortem existence" have occurred. Extensive computer analyses of their observations have been made. The results are reported in this first truly scientific investigation of the experiences of the dying at the hour of death. What these doctors and nurses have witnessed cannot be explained away by medical, psychological, cultural, or other conditioning. Yet it may answer the fundamental question of human existence. "Finally, a book that probes death and dying with modern research techniques. Osis and Haraldsson present compelling evidence that the deathbed is the gateway to another existence. The visions of the dying appear to be not hallucinations but glimpses through the windows of eternity." -Alan Vaughan, editor of *New Realities Magazine* "A major contribution to the scientific study of the question of post-mortem existence. -Raymond A. Moody, M.D., author of *Life After Life*
