Moral Psychology: Free Will and Moral Responsibility (MIT Press) (Volume 4)

Traditional philosophers approached the issues of free will and moral responsibility through conceptual analysis that seldom incorporated findings from empirical science. In recent decades, however, striking developments in psychology and neuroscience have captured the attention of many moral philosophers. This volume of *Moral Psychology* offers essays, commentaries, and replies by leading philosophers and scientists who explain and use empirical findings from psychology and neuroscience to illuminate old and new problems regarding free will and moral responsibility. The contributors -- who include such prominent scholars as Patricia Churchland, Daniel Dennett, and Michael Gazzaniga -- consider issues raised by determinism, compatibilism, and libertarianism; epiphenomenalism, bypassing, and naturalism; naturalism; and rationality and situationism. These writings show that although science does not settle the issues of free will and moral responsibility, it has enlivened the field by asking novel, profound, and important questions.
